2015 Door County Workforce Profile

National and State Economic Outlook

Robust economic growth after the Great Recession remains anticipated. The recession ended in June of 2009. This recovery has been the slowest of post-war cycles. U.S. gross domestic product (GDP) growth through this recovery cycle has averaged just over two percent per year. Most recoveries show growth rates in the three percent range.

As with all economic growth, benefits have accrued. Job levels are up. Wages have increased. Home values are nearly back to prerecession levels. Wisconsin total non-farm jobs have increased by 200,000 since the trough in February 2010 through October 2015. The state's manufacturing industries have gained almost 50,000 jobs. Total nominal wages paid have increased by 17 percent since bottoming out in 2009. Aggregate household real estate values have all but full recovered from the national housing devaluations that began in 2006.

So what is it, six years after the recession ended, that is holding the national economy back from even stronger growth? A variety of factors are having an impact, such as: flat real wages, lack of business investment, focus of business investment, slower global economic growth, a stronger U.S. currency and its impact on U.S. and Wisconsin exports, and snug government capital and operations budgets.

The silver lining may be that the slower the growth, the longer the recovery will last. This recovery is 70 months old as of December 2015 with no expected downturn in sight. The average growth period of post-war business cycles is 58.4 months.

Workforce Outlook

On the workforce front, there is much discussion of the "skills gap" – the inability of employers to find and keep skilled workers. One anecdote often voiced is that Wisconsin companies could expand business if only they could find and retain skilled workers.

Wisconsin has never had more people employed and the unemployment rate is registering low levels not seen since the early 2000s. However, as has been discussed repeatedly over the years (Winters, Strang, & Klus, 2000; Winters, Gehrke, Grosso, & Udalova, 2009; Wisconsin Taxpayer Alliance, 2015), Wisconsin faces a quantity challenge and, as a consequence, a skills challenge.

Source: Local Area Unemployment Statistics, Bureau of Labor Statistics

2015 Door County Workforce Profile

Businesses will be competing not only with each other for workers with similar skills, but also with entities of other disciplines. For example, one company may try to recruit a math teacher to become a computer programmer. Then the school will have to find another math teacher from, say, an insurance company, which, in turn, may try to recruit someone out of health care. The point is that without enough workers to go around, some businesses will end up short of talent.

This is true not only of highly skilled workers, but for all positions. Even retail and restaurant operations are displaying help-wanted signs.

During the late 1990s when the U.S. economic expansion was setting new longevity marks, there was a similar quantity challenge. The national unemployment rate fell to 3.8 percent in July 2000 and Wisconsin's unemployment rate fell to 3.0 percent in July of 1999. Two recessions alleviated the labor quantity constraints from 2001 to 2014. Now the U.S. unemployment rate is down to 5.0 percent (Wisconsin December 2015 seasonally adjusted unemployment rate was 4.3 percent), GDP is only growing at 2.0 percent, and businesses are already experiencing quantity challenges.

The major change in the labor force during this period is that now the Baby Boomers are fifteen years older and leaving the labor force in unprecedented numbers. The oldest Baby Boomers (born in 1946) will be 70 years old in 2016. The youngest (born in 1964) will be 52 years old, a mere three years from a rapid decline in their participation in the labor force.

Below is a graph of the labor force participation rate (LFPR) by age cohort. The LFPR drops precipitously after age 55. The bulk of the Baby Boomers are now over age 55.

Source: Bureau of Labor Statistics

Wisconsin's overall labor force participation rate peaked in the late 1990s and the employment-to-population ratio (e/pop) peaked in 1997 at 72.9 percent. The 2014 e/pop rate was above the 2010 low of 63.4 percent, at 64.7 percent.

The exit of Baby Boomers (people born between 1946 and 1964) from the labor market will affect future growth of Wisconsin's e/pop rate.

Population growth and age distribution will drive labor force availability in local and regional labor sheds. Below are county level demographic and economic characterizations. The primary factor driving economic trends in future years will be workforce developments and talent access.

Population and Demographics

Door County's 10 Most Populous Municipalities

	April 2010 Census	January 2015 Estimate	Numeric Change	Proportional Change
United States	308,400,408	320,289,069	11,888,661	3.9%
Wisconsin	5,686,986	5,753,324	66,338	1.2%
Door County	27,785	28,175	390	1.4%
Sturgeon Bay, City	9,144	9,202	58	0.6%
Sevastopol, Town	2,628	2,687	59	2.2%
Nasewaupee, Town	2,061	2,102	41	2.0%
Liberty Grove, Town	1,734	1,763	29	1.7%
Egg Harbor, Town	1,342	1,377	35	2.6%
Gardner, Town	1,194	1,216	22	1.8%
Brussels, Town	1,136	1,138	2	0.2%
Forestville, Town	1,096	1,113	17	1.6%
Baileys Harbor, Town	1,022	1,051	29	2.8%
Gibraltar, Town	1,021	1,045	24	2.4%

Source: Demographic Services Center, Wisconsin Department of Administration

Door County's population growth has increased significantly over the past several years. The population growth remains behind national growth trends, growing by 1.4 percent since the 2010 Census. In comparison the state's population has increased by just 1.2 percent over the same period, illustrating a series of disparate dynamics that will be discussed throughout the course of this profile. The county gained 390 residents between 2010 and 2015, a sum that is significantly greater than the 0.6 percent contraction that occurred during the previous decade (176 decline from 2000 to 2010). Its 1.4 percent growth rate is also significantly slower than the 8.8 percent growth observed in the 1990's, suggesting that the population growth that has occurred over the past twenty years is slowing. This is a common theme among many of the region's largest counties.

Many of the county's largest municipalities have also witnessed modest growth over the past five years. The Town of Sevastopol experienced the greatest growth over the past five years adding 59 residents. The City of Sturgeon Bay also gained 58 residents. This has been caused by an increase in the number of employment and real estate opportunities in the region.

Population growth has been stemmed by a negative natural increase rate. Net migration is significantly positive resulting from movement into the region. This has become more pronounced over the past several years in response to an aging population.

Components of Population Change

Labor Force Dynamics

A great deal of recent attention has been committed to changes in the Door County labor force over the past several years. Many of these conversations have focused on two related metrics — the county’s unemployment rate and the relative ability of the county’s employers to find needed talent. The narrative that has emerged in this dialogue has concluded

that, as the county’s unemployment rate has decreased precipitously since the peak of the 2007-2009 recession, employers have witnessed greater difficulty in finding needed workers. While there is a great deal of credence to this assumption, the cause of these issues is largely demographic.

The chart above tracks Door County’s unemployment rate against that of both the nation and state from January 1990 to September 2015. It is important to first note that significant seasonality exists in this data, reflecting calendar year changes in demand in industries ranging from construction to hospitality. The county’s unemployment rate is close to its lowest point in more than a decade. This is also true of the state, as a whole,

Unemployment Rates - Not Seasonally Adjusted

Labor Force Participation Rates

Source: Current Population Survey, U.S. Department of Commerce, Census Bureau

which highlights common issues. The county’s labor force has remained virtually unchanged over this period suggesting that individuals are finding employment more rapidly than new entrants are added.

Door County’s labor force participation rate has dipped below the state average over the past fifteen years. This closely mirrors changes in local unemployment and is also bolstered by a series of industry employment conditions that we will discuss in the coming pages.

Industry Employment and Wages

2014 Employment and Wage Distribution by Industry in Door County

Source: WI DWD, Bureau of Workforce Training, Quarterly Census Employment and Wages, June 2015

The charts included on this page represent 2014 annual averages from the Quarterly Census of Employment and Wages. This program presents employment and wage data for more than 186,000 employers in Wisconsin and represent our most comprehensive look at industry dynamics. All industries employment in Door County decreased by 80 employees, suggesting that a number of key industry sectors have experienced little to no growth with one exception. This is particularly notable in many of the county's largest industry sectors. The Manufacturing sector added 95 new workers, where the Education and Health Services sector experienced a modest loss of 97 workers. The most notable numerical employment growth occurred in the Manufacturing, Trade, Transportation, and Utilities and Natural Resources sectors. The construction industry has not mirrored significant growth

throughout the state as both the residential and commercial sectors have recovered to near pre-recessionary levels.

Average Annual Wage by Industry Division in 2014

	Wisconsin Average Annual Wage	Door County Average Annual Wage	Percent of Wisconsin	1-year % change
All industries	\$ 43,856	\$ 31,076	70.9%	2.8%
Natural Resources	\$ 36,156	\$ 27,153	75.1%	3.3%
Construction	\$ 55,317	\$ 43,153	78.0%	3.1%

Public Administration	\$ 44,462	\$ 27,420	61.7%	-1.4%

Source: WI DWD, Labor Market Information, QCEW, June 2015

Employers in many of Door County's industry sectors continue to pay wages that are below state averages. The county annual average wage of \$31,076 is nearly thirty percent below the state average and has increased by 2.8 percent over the past year, exceeding the rate of inflation over the same period. It is

difficult to ascertain whether wages have increased over this period among individuals in similar roles or if wages have increased by a more significant degree due to individuals changing roles either within or between organizations.

The largest difference between Door County and Wisconsin annual average industry wages can be found in the Leisure and Hospitality sector where wages exceed the state average. This is largely due to the county’s reputation as a national tourism destination. Other disparities are accounted for by differences in industry composition, especially in the Manufacturing and Financial Activities industries. Differences among other large sectors can be generally accounted for by variations within the industry with a higher share of workers in Door County working for a concentration of large regional and national employers. The wage disparities seen here are also offset to a large extent by a relatively lower cost of living.

Our focus now shifts to the consideration of potential future employment trends. The data presented on the next two pages has been produced as part of the Department’s two-year long-range employment projections cycle. The current ten-year forecast examines employment over the period between 2012 and 2022 and has been published at both the state and Workforce Development Area level. The industry and occupational employment projections are presented for the eleven-county Bay Area Workforce Development Area. This region includes more than just the area directly impacted by the Door County regional economy. Industry employment in Door County only accounts for four percent of employment in the region. However, employment and economic dynamics are similar enough within all parts of the region to comment on general trends.

Employment across all industries is expected to grow by eight percent over the ten year period, or almost 25,000 workers. This projection only forecasts levels of filled positions rather than potential demand. This further supports the earlier assertion that the availability of labor throughout the region may be actively constraining employment growth. As the region’s population continues to age and growth slows this will continue.

The most significant numerical growth is expected in the Education and Health Services (8,207) and Professional

Source: Office of Economic Advisors, Wisconsin Department of Workforce Development, September 2015

and Business Services (4,582) industry sectors. This is equal to 13 and 17 percent period growth, a rate only eclipsed by anticipated growth in the Construction sector (19 percent).

Growth in a number of other industry sectors are significant with a pair of notable outliers. Public sector and trade, transportation and utilities employment is expected to be constrained over the next decade as the workforce in this sector continues to age more rapidly than the population as a whole. Manufacturing employment is also expected to grow more modestly at three percent, slightly exceeding anticipated statewide sector growth of two percent.

An examination of projected occupational employment growth reveals a possible explanation for the moderate growth rates anticipated in a number of the region's largest industry sectors. We first see that the most significant occupational growth can be observed in a number of occupational categories largely concentrated in the Health Services sector, including Healthcare Practitioners, Healthcare Support, and Personal Care and Services workers. Significant growth is also anticipated in many other occupational sectors, supporting the narrative of long-range stability in many of the region's largest industries. The other trend that is also illustrated is that of labor constraints as openings created due to replacement needs outnumber those generated by new growth.

Personal Income

	2004 Nominal Per Capita Personal Income	2004 Per Capita Personal Income in 2014 dollars	2014 Per Capita Personal Income	Nominal Change in Per Capita Personal Income (2004 - 2014)	Inflation-adjusted Change in Per Capita Personal Income (2004 - 2014)
United States	\$34,316	\$41,709	\$46,049	34.2%	10.4%
Wisconsin	\$33,350	\$40,534	\$44,186	32.5%	9.0%
Door County	\$35,955	\$43,701	\$50,276	39.8%	15.0%

Source: Bureau of Economic Analysis

The final topic to be considered in this profile is that of personal income. It is again important to note that personal income differs from wage income in that wage income is one component of personal income, but personal income also includes secondary income sources such as rental and dividend income and transfer payments. Door County’s per capita personal income in 2014 was \$50,276, or 6,090 higher than the state average. This places Door County at the top of Wisconsin’s 72 counties ranked by income. This measure also exceeds the national average of \$46,049 by 9.1 percent, growing faster than either the state or national average over the

2014 Per Capita Personal Income

2004 - 2014 Change in Per Capita Personal Income, Inflation-adjusted

Source: Bureau of Economic Analysis

past decade as both nominal and inflation-adjusted per capita personal income in Door County continue to exceed national averages. Over the course of the decade national income growth has not kept pace with local growth. This has also greatly outpaced regional income growth. This is largely due to a rapid growth in non-wage income within the county. This is further attributed to growth in rental and investment divided revenue as well as transfer payments such as SSI and unemployment insurance. Door County’s wage growth has been modest in recent years, but we anticipate significant future growth in manufacturing and health services wages, for example. As the character of many of the region’s most prominent industry sectors continues to change we should expect this gap to once again widen. This, however, may be magnified by the continuing in-migration of young retirees into the county. This again suggests that the region should continue to enjoy some measure of economic prosperity in the near future.
