2015 Ozaukee County Workforce Profile

National and State Economic Outlook

Robust economic growth after the Great Recession remains anticipated. The recession ended in June of 2009. This recovery has been the slowest of post-war cycles. U.S. gross domestic product (GDP) growth through this recovery cycle has averaged just over two percent per year. Most recoveries show growth rates in the three percent range.

As with all economic growth, benefits have accrued. Job levels are up. Wages have increased. Home values are nearly back to prerecession levels. Wisconsin total non-farm jobs have increased by 200,000 since the trough in February 2010 through October 2015. The state's manufacturing industries have gained almost 50,000 jobs. Total nominal wages paid have increased by 17 percent since bottoming out in 2009. Aggregate household real estate values have all but full recovered from the national housing devaluations that began in 2006.

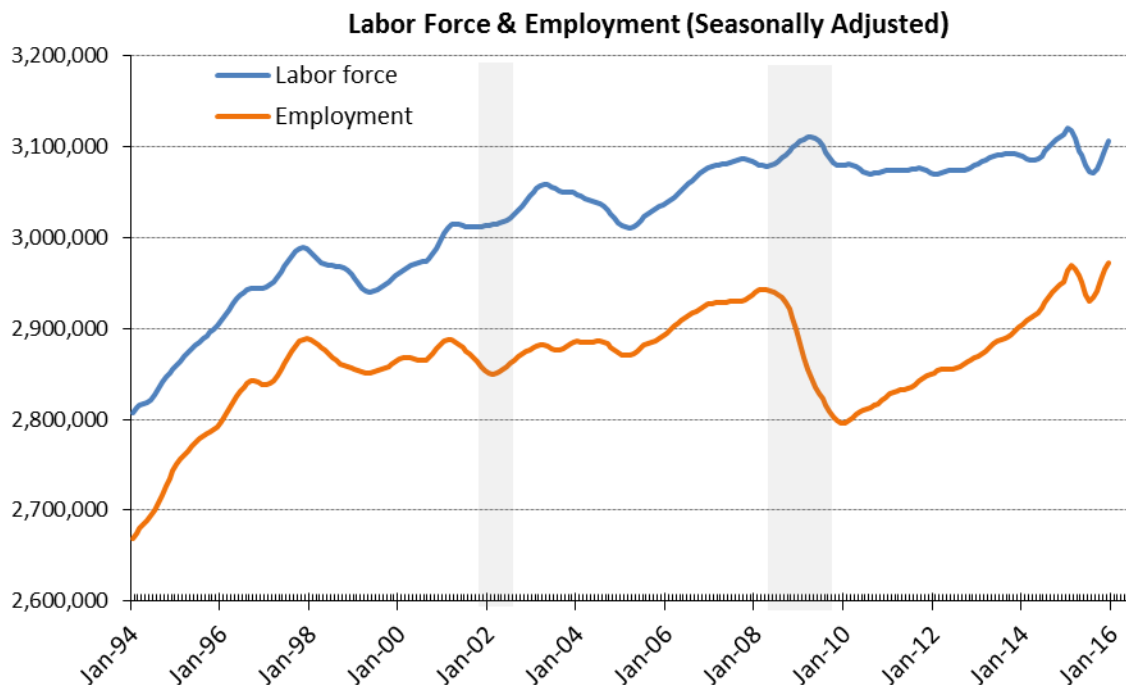

So what is it, six years after the recession ended, that is holding the national economy back from even stronger growth? A variety of factors are having an impact, such as: flat real wages, lack of business investment, focus of business investment, slower global economic growth, a stronger U.S. currency and its impact on U.S. and Wisconsin exports, and snug government capital and operations budgets.

The silver lining may be that the slower the growth, the longer the recovery will last. This recovery is 70 months old as of December 2015 with no expected downturn in sight. The average growth period of post-war business cycles is 58.4 months.

Workforce Outlook

On the workforce front, there is much discussion of the "skills gap" – the inability of employers to find and keep skilled workers. One anecdote often voiced is that Wisconsin companies could expand business if only they could find and retain skilled workers.

Wisconsin has never had more people employed and the unemployment rate is registering low levels not seen since the early 2000s. However, as has been discussed repeatedly over the years (Winters, Strang, & Klus, 2000; Winters, Gehrke, Grosso, & Udalova, 2009; Wisconsin Taxpayer Alliance, 2015), Wisconsin faces a quantity challenge and, as a consequence, a skills challenge.

Source: Local Area Unemployment Statistics, Bureau of Labor Statistics

2015 Ozaukee County Workforce Profile

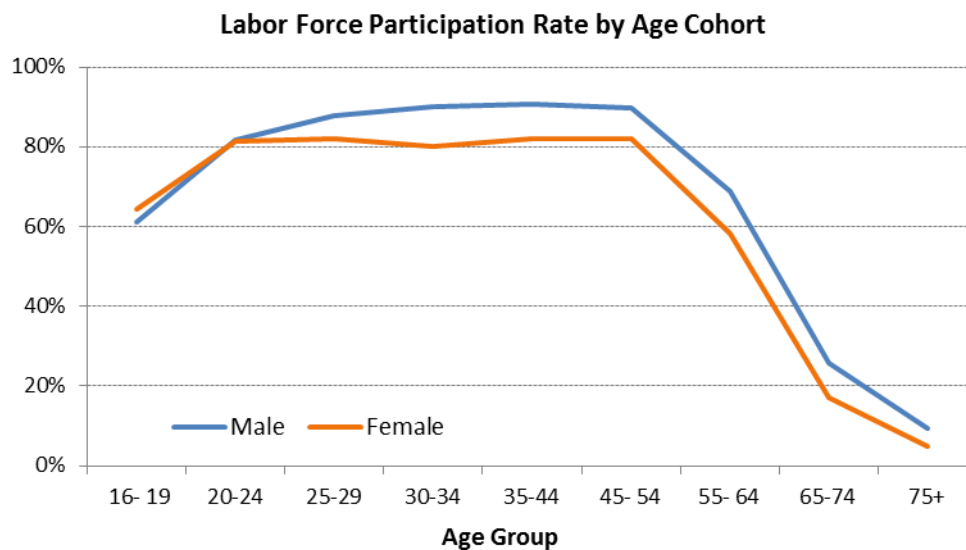

Businesses will be competing not only with each other for workers with similar skills, but also with entities of other disciplines. For example, one company may try to recruit a math teacher to become a computer programmer. Then the school will have to find another math teacher from, say, an insurance company, which, in turn, may try to recruit someone out of health care. The point is that without enough workers to go around, some businesses will end up short of talent.

This is true not only of highly skilled workers, but for all positions. Even retail and restaurant operations are displaying help-wanted signs.

During the late 1990s when the U.S. economic expansion was setting new longevity marks, there was a similar quantity challenge. The national unemployment rate fell to 3.8 percent in July 2000 and Wisconsin's unemployment rate fell to 3.0 percent in July of 1999. Two recessions alleviated the labor quantity constraints from 2001 to 2014. Now the U.S. unemployment rate is down to 5.0 percent (Wisconsin December 2015 seasonally adjusted unemployment rate was 4.3 percent), GDP is only growing at 2.0 percent, and businesses are already experiencing quantity challenges.

The major change in the labor force during this period is that now the Baby Boomers are fifteen years older and leaving the labor force in unprecedented numbers. The oldest Baby Boomers (born in 1946) will be 70 years old in 2016. The youngest (born in 1964) will be 52 years old, a mere three years from a rapid decline in their participation in the labor force.

Below is a graph of the labor force participation rate (LFPR) by age cohort. The LFPR drops precipitously after age 55. The bulk of the Baby Boomers are now over age 55.

Source: Bureau of Labor Statistics

Wisconsin's overall labor force participation rate peaked in the late 1990s and the employment-to-population ratio (e/pop) peaked in 1997 at 72.9 percent. The 2014 e/pop rate was above the 2010 low of 63.4 percent, at 64.7 percent.

The exit of Baby Boomers (people born between 1946 and 1964) from the labor market will affect future growth of Wisconsin's e/pop rate.

Population growth and age distribution will drive labor force availability in local and regional labor sheds. Below are county level demographic and economic characterizations. The primary factor driving economic trends in future years will be workforce developments and talent access.

Population and Demographics

Ozaukee County's 10 Most Populous Municipalities

	April 2010 Census	January 2015 Estimate	Numeric Change	Proportional Change
United States	308,400,408	320,289,069	11,888,661	3.9%
Wisconsin	5,686,986	5,753,324	66,338	1.2%
Ozaukee County	86,395	87,682	1,287	1.5%
Mequon, City	23,132	23,793	661	2.9%
Grafton, Village	11,459	11,519	60	0.5%
Cedarburg, City	11,412	11,500	88	0.8%
Port Washington, City	11,250	11,459	209	1.9%
Cedarburg, Town	5,760	5,875	115	2.0%
Saukville, Village	4,451	4,464	13	0.3%
Grafton, Town	4,053	4,124	71	1.8%
Thiensville, Village	3,235	3,221	-14	-0.4%
Belgium, Village	2,245	2,273	28	1.2%
Fredonia, Village	2,160	2,183	23	1.1%

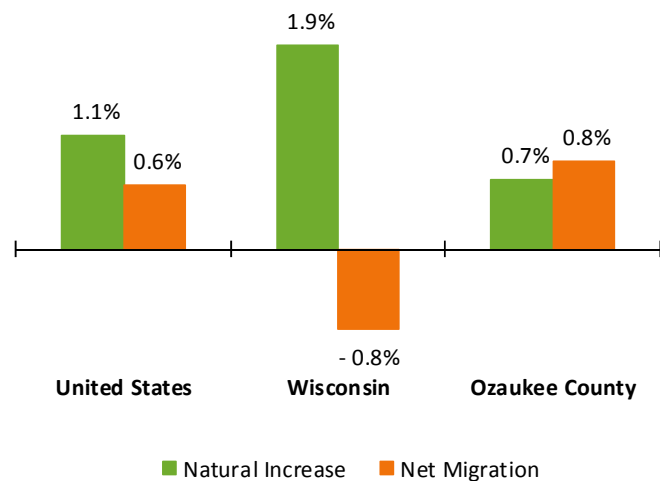

Source: Demographic Services Center, Wisconsin Department of Administration

The chart above lists Ozaukee County's ten largest municipalities and compares population growth since the 2010 Census at the municipal, county, state, and national level. Population growth in Wisconsin and Ozaukee County was sluggish as compared to the United States, although Ozaukee's growth rate was somewhat higher than the state's and neighboring counties'. Milwaukee County to the south grew by only 0.2 percent while the population of Sheboygan County to the north actually declined by 202 residents or -0.2 percent during the period. Washington and Fond du Lac Counties to the west grew by 1.2 and 1.5 percent, respectively. County growth of 1,287 residents, or 1.5 percent, was not evenly distributed among municipalities. The City of Mequon accounted for more than half of Ozaukee County's growth with a gain of 661 residents, the largest numerical and proportional increase.

As a result of the recent recession and housing market crash, most Wisconsin counties lost rather than gained residents to migration. In Ozaukee County, the number of people moving into the county exceeded the number moving out, resulting in a net migration gain of 0.8 percent.

Natural increases in population are closely correlated with age demographics. Strong natural increases generally occur in younger populations, which have higher fertility and birth rates and lower death rates. At 44.3 years, the 2014 median age of Ozaukee County residents was substantially older than

Components of Population Change

Source: Demographic Services Center, Wisconsin Department of Administration

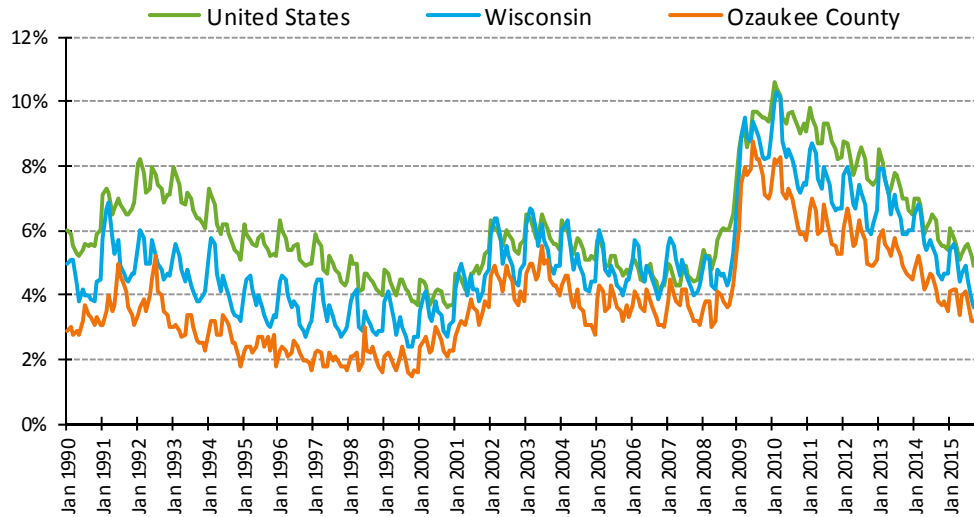

Labor Force Dynamics

the state median of 39.2. Correspondingly, Ozaukee County's natural increase rate of 0.7 per cent was lower.

The graph to the right tracks the unemployment rate in Ozaukee County since 1990 and compares it to state and national rates during the same time period. Since this unemployment data has not been seasonally adjusted, or smoothed, the

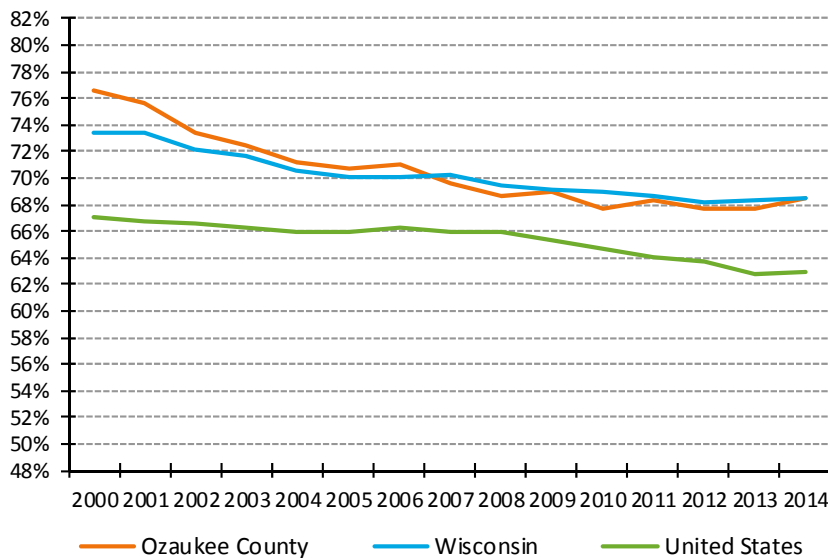

graph also shows seasonal employment variations within each year. The seasonality of the county's labor market is moderate and typical, with normal peaks of unemployment early in the year and again in summer as students enter the job market in search of work, and normal troughs late in the year. The recent recession caused national, state, and county unemployment rates to rise sharply after 2008 and peak in early 2010. Since then, rates have steadily fallen as the economy slowly recovers. Ozaukee County's average annual unemployment rate in 2015 was 3.7 percent, substantially lower than the national rate of 5.3 percent and state rate of 4.6 percent.

Unemployment Rates - Not Seasonally Adjusted

Labor Force Participation Rates

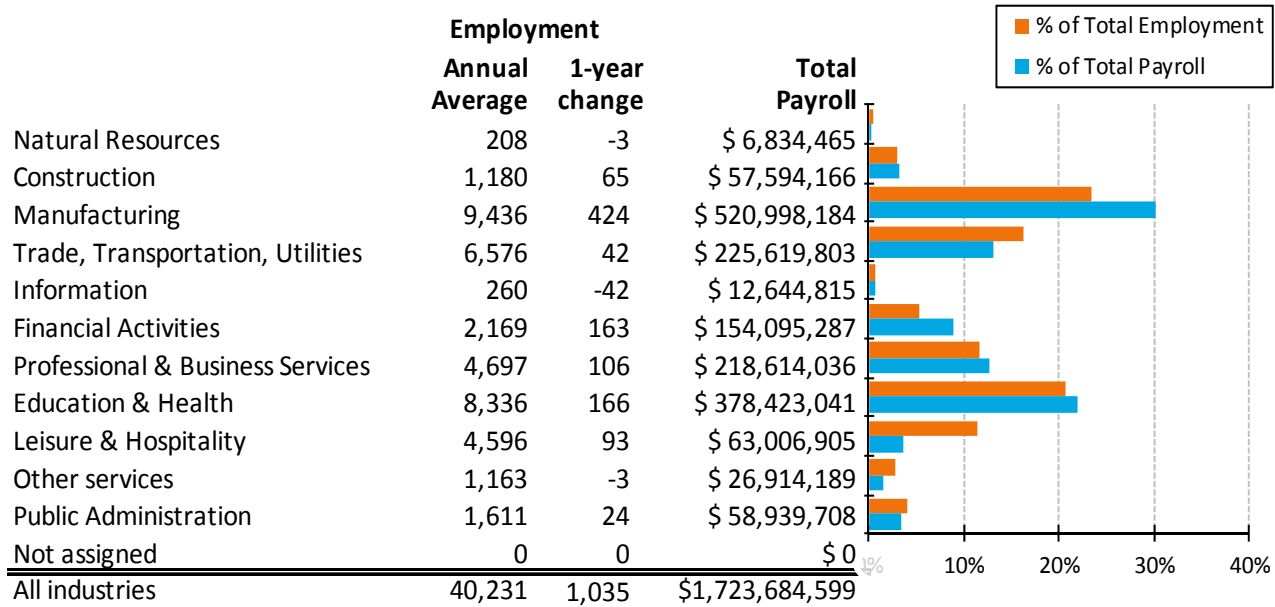

Source: Current Population Survey, U.S. Department of Commerce, Census Bureau

The unemployment rate is closely related to the labor force participation rate (LFPR), which reflects not only an area's economic conditions, but also its age demographics. It is the portion of the population aged 16 years and older who are employed or actively seeking employment. Aging of the population combined with high unemployment during and after the recent recession have caused national, state, and county LFPRs to trend downward in recent years. But recent tightening in the job market has attracted more participants, causing participation rates to level

Industry Employment and Wages

2014 Employment and Wage Distribution by Industry in Ozaukee County

Source: WI DWD, Bureau of Workforce Training, Quarterly Census Employment and Wages, June 2015

off in the United States and Wisconsin and actually rise in Ozaukee County. The County's LFPR increased 0.9 percent between 2013 and 2014 to 68.6 percent, slightly higher than Wisconsin's LFPR and much higher than the national participation rate.

The employment and wage distribution graph above shows the one-year change in employment and the economic impact of industry sectors in Ozaukee County from both an employment and payroll perspective. The county's job base grew by 1,035 jobs or 2.6 percent during 2014, which was twice average statewide job growth of 1.3 percent during the same period. Job growth was not evenly distributed among sectors. Manufacturing is the largest sector in terms of not only employment and wages, but also job growth. Manufacturing employment

in Ozaukee County increased by 424 jobs, or 4.7 percent, more than quadruple statewide growth of 1.1 percent in the sector. Manufacturing accounts for 23 percent of the county's jobs and 30 percent of total county payroll. This disparity reflects the comparatively higher wages paid to manufacturing workers than to workers in other industries such as education and health services or trade, transportation, and utilities,

Average Annual Wage by Industry Division in 2014

the county’s second and third largest employment sectors.

The table at the bottom of page five shows annual average wage by industry in Ozaukee County, compares those wages to the statewide average, and displays the county’s one-year change in each of the sectors. Ozaukee’s average annual wage is 2.3 percent lower than the state average and increased 2.1 percent in 2014, which was less than statewide annual wage growth of 2.5 percent. The highest wages were in the financial activities sector, which had an average annual wage of \$71,044, nearly 15 percent higher than the state average wage in the sector. Financial activities sector wage growth of 2.8 percent during 2014 was strong compared to other sectors in the county, but lower than statewide financial activities wage growth of 3.6 percent.

The table above presents ten-year regional employment projections by industry sector for the W-O-W Workforce Development Area, which is comprised of Waukesha, Ozaukee, and Washington Counties. The change in the number of jobs from 2012 to 2022 represents new jobs expected to be created during the period.

In 2014, Waukesha had the largest share of the region’s employment, with 71 percent of the region’s jobs. Ozaukee and Washington Counties had 13 and 16 percent, respectively. Ten-year regional employment is projected to exceed statewide job growth of 7.1 percent. Jobs in the three-county area are expected to increase 10 percent between 2012 and 2022, with average annual growth of 1.0 percent or 3,446 jobs per year. Employment in the area actually exceeded projections, growing by 3,598 new jobs or 1.1 percent during 2014.

The education and health services sector and professional and business services sector are projected to add the most jobs between 2012 and 2022. Within the larger education and health services sector, health services employment is expected to grow much faster than educational services. The professional and business services sector provides professional, technical, and administrative services to businesses. A significant portion of recent and projected growth in this sector are in the employment services subsector, which often provide business with temporary workers. These workers may work in a variety of industries such as health care or manufacturing, but as long as they are employed by an employment services establishment, their jobs are counted in the professional

and business services sector, even if they are a nurse working in a hospital or a welder working in a manufacturing plant.

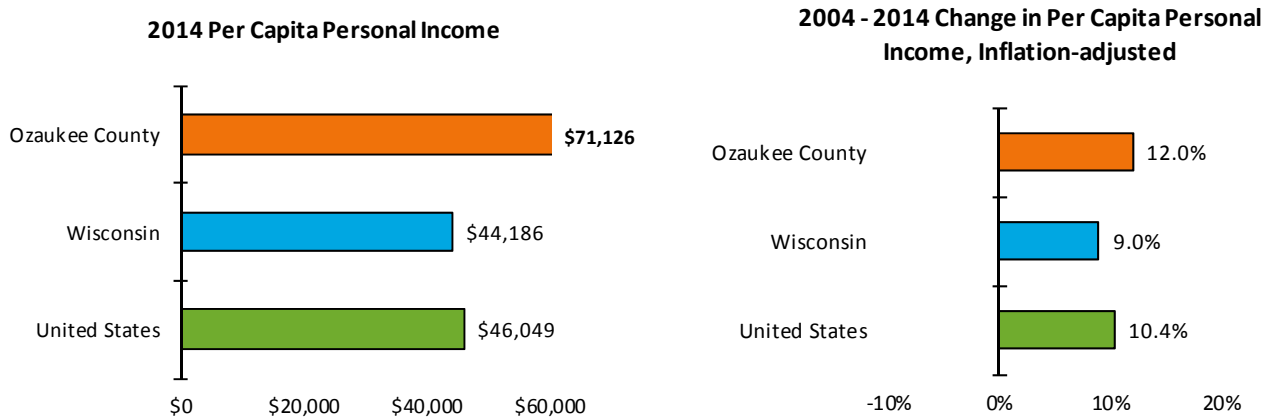

To get a better idea of the types of jobs included in employment projections, we can also look at expected job growth by occupation. The table above displays projected total job openings through 2022, which includes openings resulting from creation of new jobs (Change column) and also replacement openings in previously created jobs that are anticipated to occur as incumbent workers leave those positions, necessitating the hiring of new workers to replace them (Replacement Openings column). Large numbers of Baby Boomers are expected to retire within the next few years, which is why projected replacement openings far exceed the number of openings expected to occur as a result of job growth. This phenomenon is occurring not only in the W-O-W region, but throughout the wider economy as well. The largest number of job openings are projected in office and administrative support, sales and related, and food preparation and serving. Large numbers of replacement openings are projected even in those occupations which are not expected to grow significantly, such as production. This is especially common in occupations with older workforces and large numbers of anticipated retirements during the projection period as well as low-wage occupations such as food service and preparation which tend to have younger workforces but higher rates of employee turnover.

Personal Income

	2004 Nominal Per Capita Personal Income	2004 Per Capita Personal Income in 2014 dollars	2014 Per Capita Personal Income	Nominal Change in Per Capita Personal Income (2004 - 2014)	Inflation-adjusted Change in Per Capita Personal Income (2004 - 2014)
United States	\$34,316	\$41,709	\$46,049	34.2%	10.4%
Wisconsin	\$33,350	\$40,534	\$44,186	32.5%	9.0%
Ozaukee County	\$52,230	\$63,482	\$71,126	36.2%	12.0%

Source: Bureau of Economic Analysis

The chart above displays ten-year personal income trend in Ozaukee County, Wisconsin and the United States. Dollar amounts have been adjusted for inflation to allow comparison between 2004 and 2014. Personal income consists of earned income from employment plus income from assets (dividends, interest, and rent receipts) plus transfer receipts. Transfer receipts are government payments not made in exchange for goods or services. Examples include, but are not limited to, social security checks, unemployment insurance, veterans' benefits, Medicare, Medicaid, and public assistance. Per capita personal income (PCPI) is calculated by dividing total per-

Source: Bureau of Economic Analysis

sonal income in a geographic area by that area's total population. The population number used to calculate PCPI is the entire population, not just those of working age, and includes children, retirees and others who are not typically wage earners. Similar to adjusting for inflation, which allows us to compare between time periods, adjusting personal income to a per capita basis allows us compare areas which have different population sizes.

Ten-year county income growth exceeded state and national rates and Ozaukee's PCPI of \$71,126 was over 60 percent higher than state PCPI of \$44,186. In a ranking of county PCPI size, Ozaukee ranked highest of Wisconsin's 72 counties, well ahead of second-place Waukesha, with PCPI of \$60,945 and third-place Dane, with PCPI of \$51,523. Ozaukee County's strong PCPI comes as no surprise, given low rates of unemployment enjoyed by its residents and access to high wage jobs in nearby Milwaukee and Waukesha Counties.
