2015 Vernon County Workforce Profile

National and State Economic Outlook

Robust economic growth after the Great Recession remains anticipated. The recession ended in June of 2009. This recovery has been the slowest of post-war cycles. U.S. gross domestic product (GDP) growth through this recovery cycle has averaged just over two percent per year. Most recoveries show growth rates in the three percent range.

As with all economic growth, benefits have accrued. Job levels are up. Wages have increased. Home values are nearly back to prerecession levels. Wisconsin total non-farm jobs have increased by 200,000 since the trough in February 2010 through October 2015. The state's manufacturing industries have gained almost 50,000 jobs. Total nominal wages paid have increased by 17 percent since bottoming out in 2009. Aggregate household real estate values have all but full recovered from the national housing devaluations that began in 2006.

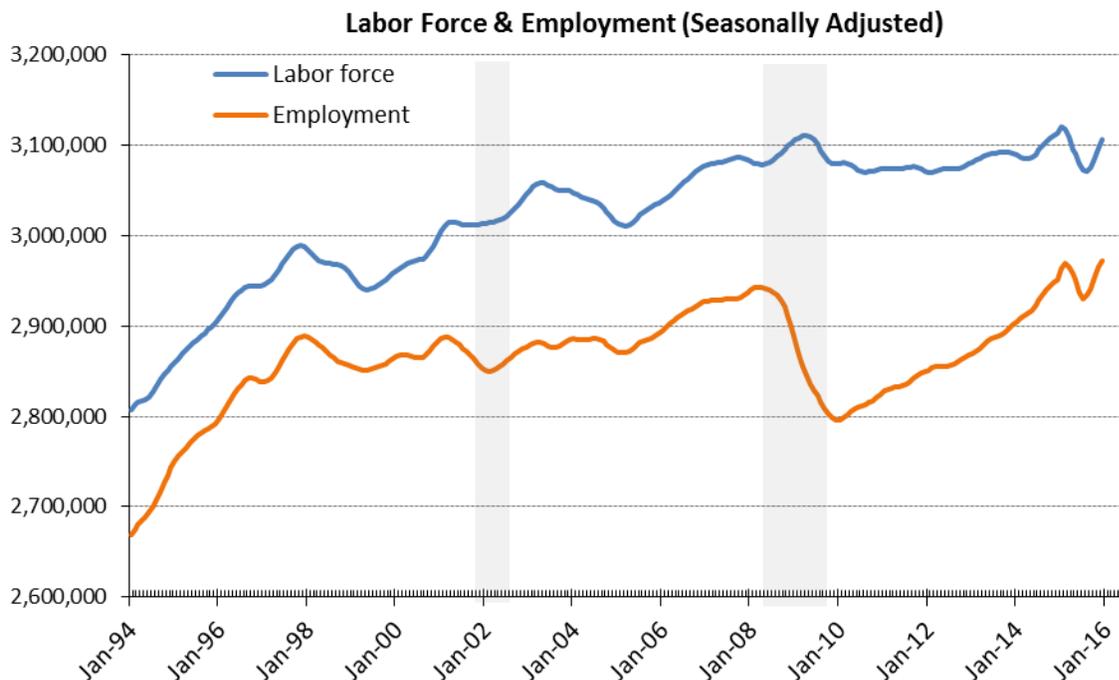

So what is it, six years after the recession ended, that is holding the national economy back from even stronger growth? A variety of factors are having an impact, such as: flat real wages, lack of business investment, focus of business investment, slower global economic growth, a stronger U.S. currency and its impact on U.S. and Wisconsin exports, and snug government capital and operations budgets.

The silver lining may be that the slower the growth, the longer the recovery will last. This recovery is 70 months old as of December 2015 with no expected downturn in sight. The average growth period of post-war business cycles is 58.4 months.

Workforce Outlook

On the workforce front, there is much discussion of the "skills gap" – the inability of employers to find and keep skilled workers. One anecdote often voiced is that Wisconsin companies could expand business if only they could find and retain skilled workers.

Wisconsin has never had more people employed and the unemployment rate is registering low levels not seen since the early 2000s. However, as has been discussed repeatedly over the years (Winters, String, & Klaus, 2000; Winters, Gherkin, Grosso, & Ulanova, 2009; Wisconsin Taxpayer Alliance, 2015), Wisconsin faces a quantity challenge and, as a consequence, a skills challenge.

Source: Local Area Unemployment Statistics, Bureau of Labor Statistics

2015 Vernon County Workforce Profile

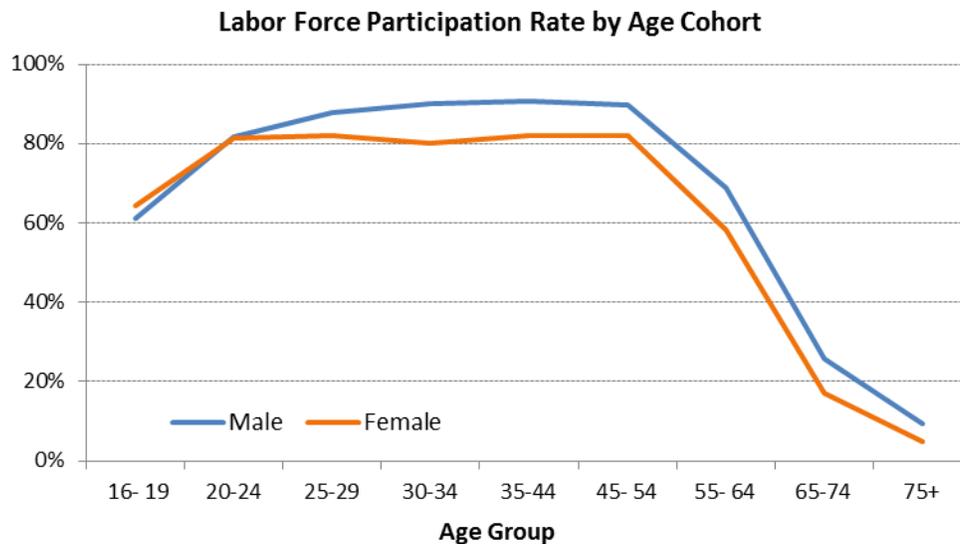

Businesses will be competing not only with each other for workers with similar skills, but also with entities of other disciplines. For example, one company may try to recruit a math teacher to become a computer programmer. Then the school will have to find another math teacher from, say, an insurance company, which, in turn, may try to recruit someone out of health care. The point is that without enough workers to go around, some businesses will end up short of talent.

This is true not only of highly skilled workers, but for all positions. Even retail and restaurant operations are displaying help-wanted signs.

During the late 1990s when the U.S. economic expansion was setting new longevity marks, there was a similar quantity challenge. The national unemployment rate fell to 3.8 percent in July 2000 and Wisconsin's unemployment rate fell to 3.0 percent in July of 1999. Two recessions alleviated the labor quantity constraints from 2001 to 2014. Now the U.S. unemployment rate is down to 5.0 percent (Wisconsin December 2015 seasonally adjusted unemployment rate was 4.3 percent), GDP is only growing at 2.0 percent, and businesses are already experiencing quantity challenges.

The major change in the labor force during this period is that now the Baby Boomers are fifteen years older and leaving the labor force in unprecedented numbers. The oldest Baby Boomers (born in 1946) will be 70 years old in 2016. The youngest (born in 1964) will be 52 years old, a mere three years from a rapid decline in their participation in the labor force.

Below is a graph of the labor force participation rate (LFPR) by age cohort. The LFPR drops precipitously after age 55. The bulk of the Baby Boomers are now over age 55.

Source: Bureau of Labor Statistics

Wisconsin's overall labor force participation rate peaked in the late 1990s and the employment-to-population ratio (e/pop) peaked in 1997 at 72.9 percent. The 2014 e/pop rate was above the 2010 low of 63.4 percent, at 64.7 percent.

The exit of Baby Boomers (people born between 1946 and 1964) from the labor market will affect future growth of Wisconsin's e/pop rate.

Population growth and age distribution will drive labor force availability in local and regional labor sheds. Below are county level demographic and economic characterizations. The primary factor driving economic trends in future years will be workforce developments and talent access.

Population and Demographics

Vernon County's 10 Most Populous Municipalities

	April 2010 Census	January 2015 Estimate	Numeric Change	Proportional Change
United States	308,745,538	321,418,820	12,673,282	4.1%
Wisconsin	5,686,986	5,753,324	66,338	1.2%
Vernon County	29,773	30,049	276	0.9%
Viroqua, City	4,362	4,343	-19	-0.4%
Westby, City	2,200	2,229	29	1.3%
Viroqua, Town	1,718	1,747	29	1.7%
Hillsboro, City	1,417	1,410	-7	-0.5%
Clinton, Town	1,358	1,386	28	2.1%
Bergen, Town	1,364	1,362	-2	-0.1%
Franklin, Town	1,140	1,176	36	3.2%
Jefferson, Town	1,143	1,146	3	0.3%
Hamburg, Town	973	980	7	0.7%
Christiana, Town	931	938	7	0.8%

Source: Demographic Services Center, Wisconsin Department of Administration

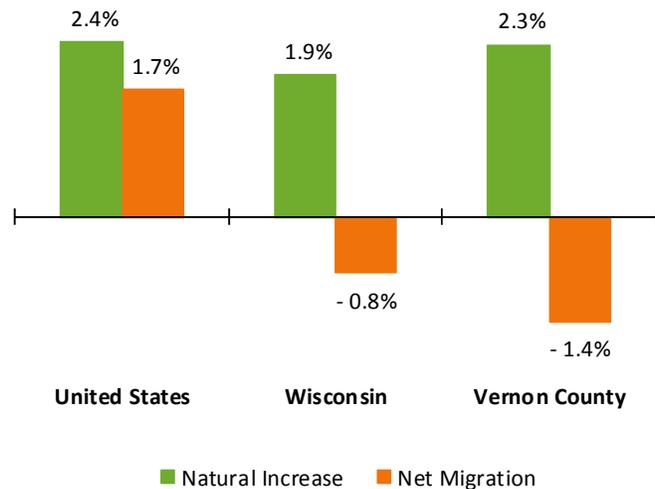

Vernon County, on the western edge of Wisconsin, shares a border with one of the state's Metropolitan Statistical Areas (MSA). However, Vernon County contains far fewer residents than its northern neighboring county, La Crosse, which is part of the MSA. Vernon County has grown, adding 276 new residents since the 2010 Census, and as of January 1, 2015 crossed the 30,000 mark in population. The population in Vernon County totaled 30,049 on January 1, 2015, an increase of 0.9 percentage points since the 2010 census.

Seven of Vernon's ten largest municipalities contributed to the county's growth, with increases in four of those municipalities accounting for 45 percent of the county's total increase. The City of Viroqua, the most populated municipality, lost 19 residents, but the next two largest entities added 29 persons each. The Town of Franklin was the local area with the largest percentage increase, 3.2 percent.

Population changes are made up of two components: natural increase and net migration. Natural changes compare births and deaths. Migration looks at movement of people in and out of an area. Natural growth is generally stable over time while migration patterns can change quickly with economic factors.

Vernon County's population increase is due entirely to a net natural increase, suffering a loss in population due to migration factors. The migration component is more susceptible to economic changes. Migration slowed substantially around the onset of the most recent recession (December 2007), and the state and the county have measured net losses in migration since.

Components of Population Change

Labor Force Dynamics

The graph to the right outlines Vernon County's monthly unemployment rate over the last 25 years and compares it to the state and nation. The graph provides insight on two elements: 1) long-term unemployment trends and 2) labor market seasonality.

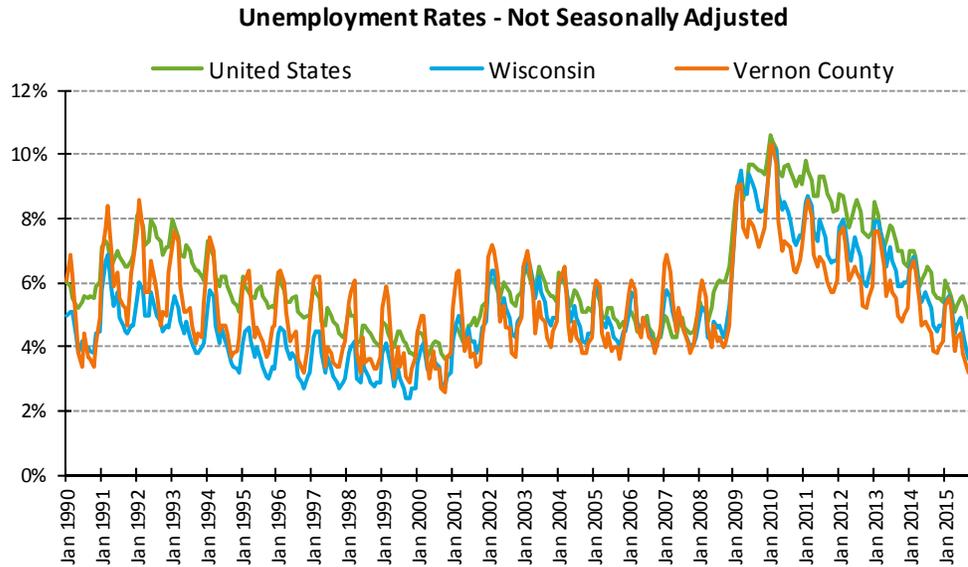

The unemployment rate in Vernon County had historically been higher than the statewide rate, but the gap closed over time and around the start of

the "Great Recession" reversed itself with statewide rates going higher than Vernon County rates. The county's unemployment rate is substantially more seasonal than the state as a whole, which indicates a differing industry employment mix. Vernon County's employment is more heavily influenced by hospitality, agriculture, and seasonally based manufacturing than the state as a whole.

The graph on the bottom of the page depicts the labor force participation rate (LFPR) for Vernon County, Wisconsin, and the nation over the last fourteen years. The LFPR is typically used to measure the engaged portion of an economy's labor force. The participation rate denotes the number of people who are either working or are actively looking for employment. The number of people who are no longer actively looking for work are not

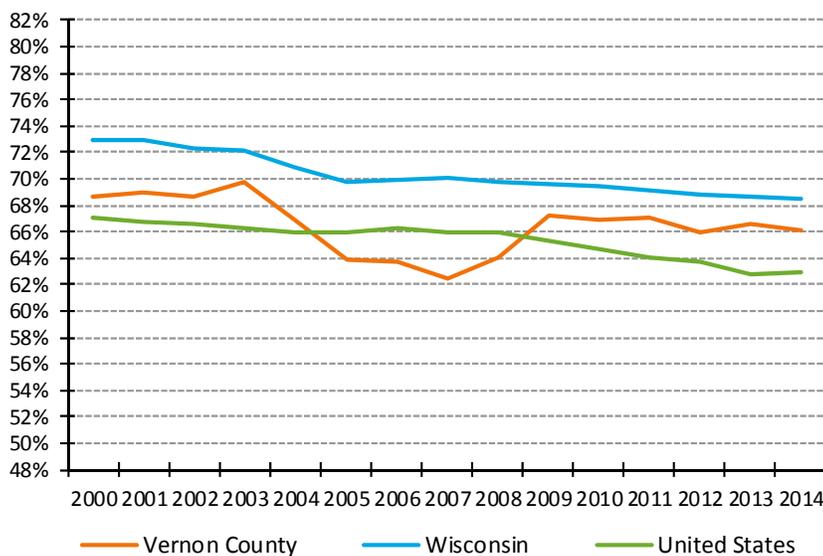

included in the participation rate. During an economic recession, workers may get discouraged and stop looking for employment, and as a result, the participation rate decreases.

This graph shows a downward trend for LFPR for the nation, state, and Vernon County. It is tempting to attribute the downward trend entirely to the economy, as 2000 marked the end of an unprecedented expansionary period and 2008 the start of the "Great Recession." However, the long term trend showing a declining LFPR is largely due to an aging population. As the population ages, residents are more likely to exit the labor force.

Industry Employment and Wages

2014 Employment and Wage Distribution by Industry in Vernon County

Source: WI DWD, DET, BWITS, Quarterly Census Employment and Wages, June 2015

Jobs and wages are the lifeblood of any economy. The more well-paying jobs in a region, the better the prospects for its economy; and the more diverse the county’s industry sectors, the more insulated it is from major losses. In Vernon County, however, 32.2 percent of county jobs are in the industry super-sector of education & health services; and another 27.9 percent in the super-sector of trade, transportation, & utilities.

Retail and wholesale trade account for the lion’s share of Vernon County’s employment in the super-sector of trade, transportation, & utilities. In fact, retail trade accounts for 42.5 percent and wholesale trade comprises 32.3 percent of employment in the aforementioned large grouping. The remaining 25.2 percent of employment in this super-sector in Vernon is distributed across the transportation, warehousing, and utilities sub-sectors.

Employers in education and health services provide the greatest share of jobs in Vernon County as well as the highest total payroll. Trade, transportation, & utilities however, posted the largest employment addition in Vernon County in 2014.

Average Annual Wage by Industry Division in 2014

	Wisconsin Average Annual Wage	Vernon County Average Annual Wage	Percent of Wisconsin	1-year % change
All industries	\$ 43,856	\$ 31,505	71.8%	1.3%
Natural Resources	\$ 36,156	\$ 24,478	67.7%	0.0%
Construction	\$ 55,317	\$ 36,578	66.1%	-0.1%
Manufacturing	\$ 54,365	\$ 39,840	73.3%	1.5%
Trade, Transportation & Utilities	\$ 37,362	\$ 33,009	88.3%	-1.9%
Information	\$ 62,482	\$ 44,209	70.8%	2.3%
Financial Activities	\$ 61,884	\$ 34,307	55.4%	2.4%
Professional & Business Services	\$ 52,386	\$ 46,640	89.0%	23.6%
Education & Health	\$ 44,829	\$ 32,765	73.1%	1.2%
Leisure & Hospitality	\$ 16,055	\$ 9,413	58.6%	2.5%
Other Services	\$ 25,847	\$ 21,777	84.3%	4.4%
Public Administration	\$ 44,462	\$ 26,351	59.3%	1.9%

Source: WI DWD, Labor Market Information, QCEW, June 2015

Vernon County’s sector paying closest to the state average in 2014 was professional & business services, with an average wage of \$46,640, or 89 percent of its statewide average. Professional & business services is followed by trade, transportation & utilities (\$33,009 — 88.3 percent of its statewide average), and other services (\$21,777 — 84.3 of its statewide average).

Employment Projections

Western Workforce Development Area Industry Projections, 2012-2022

Buffalo, Crawford, Jackson, Juneau, La Crosse, Monroe, Trempealeau and Vernon Counties

Industry	2012	Projected	Change (2012-2022)	
	Employment	2022 Employment	Employment	Percent

Source: Office of Economic Advisors, Wisconsin Department of Workforce Development, September 2015.

In addition to looking at the current state of the economy in Vernon County, it is useful to look at projections of how employment in the area is expected to change. What follows are projections of employment changes by industry sector and by occupation. Please note that these projections are for the collective counties of Buffalo, Crawford, Jackson, Juneau, La Crosse, Monroe, Trempealeau and Vernon. Together, these eight counties form the Western Wisconsin Workforce Development Area.

These projections use information from the Quarterly Census of Employment and Wages (QCEW) program, including unpublished data from the Bureau of Labor Statistics (BLS) as well as data from the Census Bureau's Current Population Survey (CPS). While these projections take into account anticipated changes in Wisconsin's economy, please note that unanticipated events may affect the accuracy of the projections.

In 2012, the area's three largest industry sectors by jobs were the Trade, Transportation, & Utilities; Education & Health Services; and Manufacturing sectors. Together, these sectors represented 57.5 percent of jobs in 2012 and are expected to continue as the three largest in 2022. The Education & Health Services sector is projected to gain more jobs than the other two leading sectors. Overall, there are 11,661 more jobs projected in 2022, an eight percent increase from 2012.

The share of total jobs by industry sector is projected to change little through 2022. The Manufacturing sector is projected to have the largest decline in share of jobs even with an increase in employment. From 2012 to 2022, the share of jobs in the Manufacturing sector is projected to decrease from 16.4 percent to 14.9 percent. Readers should note that while manufacturing employment as a whole will decline, there will be many opportunities for young workers in manufacturing because retirements in the sector are going to outpace employment declines due to economic shifts for the foreseeable future.

The share of jobs in the Education & Health Services sector is projected to have the largest gain. Furthermore, the Education & Health Services sector is projected to have the largest numeric gain in jobs with 4,064 additional jobs in 2022, a 15 percent gain from 2012. The largest proportional increases are projected in the Professional & Business Services sector with an 28 percent rate of growth. Most sectors are projected to gain jobs by 2022 with two sectors, Natural Resources and Manufacturing, expecting slight contractions in total employment.

Transportation & Material Moving	13,647	14,628	981	7%	110	298	408	\$ 31,156

Source: Office of Economic Advisors, Wisconsin Department of Workforce Development, September 2015

In 2012, the area's largest occupation group was Office & Administrative Support with 19,308 jobs, 14 percent of total employment. Of the twenty-two occupation groups, the top five together accounted for 54.3 percent of jobs. While these five groups are projected to remain the top groups in 2022, the share of jobs within these groups is projected to decline to 52.9 percent of jobs.

The share of total jobs by occupational group is projected to change little through 2022. However, all of the top five groups, Office & Administrative Support; Transportation & Material Moving; Production; Sales & Related; and Food Preparation and Serving are projected to experience slight declines in employment share. The Healthcare Practitioners & Technical group is projected to have the largest gain in share, with a rise from 7.1 percent to 7.8 percent of jobs between 2012 and 2022.

Furthermore, the largest numeric and proportional gain in jobs is projected in the Healthcare Practitioners group with an increase of 1,794 jobs by 2022, an 18 percent gain. The Construction & Extraction group is projected to experience the second largest proportional gain in jobs with a numeric gain of 878. The Farming, Fishing, and Forestry occupation group is projected to experience a decrease of 119 jobs by 2022, a 15 percent decline. All other occupation groups are projected to add jobs.

Personal Income

	2004 Nominal Per Capita Personal Income	2004 Per Capita Personal Income in 2014 dollars	2014 Per Capita Personal Income	Nominal Change in Per Capita Personal Income (2004 - 2014)	Inflation-adjusted Change in Per Capita Personal Income (2004 - 2014)
United States	\$34,316	\$41,709	\$46,049	34.2%	10.4%
Wisconsin	\$33,350	\$40,534	\$44,186	32.5%	9.0%
Vernon County	\$24,607	\$29,908	\$35,532	44.4%	18.8%

Source: Bureau of Economic Analysis

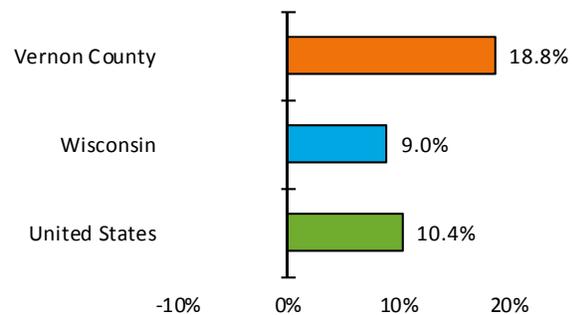

Total Personal Income (TPI) is the sum of three components, namely (i) employment earnings; (ii) property income (dividends, interest and rental income); and (iii) personal current transfers receipts (government payments like Social Security, Medicare, Medicaid and Unemployment Insurance).

Per capita personal income (PCPI) is Total Personal Income (TPI) divided by the total population. This average income figure is often used to gauge economic vitality. It is a useful indicator for comparing income dynamics among geographic areas since it provides comparison of income per resident.

2014 Per Capita Personal Income

2004 - 2014 Change in Per Capita Personal Income, Inflation-adjusted

Source: Bureau of Economic Analysis

The PCPI figures displayed in the tables above differs from the annual average wage discussed on Page 5 in two ways. First, PCPI refers to place of residence while annual wages refers to place of work. This means PCPI includes wages earned by Vernon County residents, but not wages of those who travel from another county to work for employers located in Vernon County. Second, PCPI includes multiple sources of income, not just wages.

At \$35,532, PCPI in Vernon County was lower than both the state and national average, and ranked 67th among Wisconsin's 72 counties. This low ranking has several contributing factors. Vernon County residents, on average, are older than their statewide counterparts. Older residents who are not part of the labor force still contribute to PCPI as the recipients of transfer payments and dividend/interest/rental income. However, earnings are the primary source of PCPI, and wage income will generally add more to a county's income than income from other sources. Secondly, wages in Vernon County are only 71.8 of the statewide annual average.
